Fuel Reduction for the Mobility Air Forces Christopher A. Mouton,James D. Powers,Daniel M. Romano,Christopher Guo,Sean Bednarz,Caolionn O'Connell,2015 Reducing aviation fuel use is an ongoing goal for military and civil operators, and Air Mobility Command is feeling increasing pressure to further reduce fuel use by implementing and following known best practices. Although the Air Force had achieved a 12 percent reduction in fuel consumption by March 2012, it must continue to pursue cost-effective options to reduce fuel use even further.

On Integrating Unmanned Aircraft Systems into the National Airspace System Konstantinos Dalamagkidis, Kimon P. Valavanis, Les A. Piegl, 2011-10-05 This book presents, in a comprehensive way, current unmanned aviation regulation, airworthiness certification, special aircraft categories, pilot certification, federal aviation requirements, operation rules, airspace classes and regulation development models. It discusses unmanned aircraft systems levels of safety derived mathematically based on the corresponding levels for manned aviation. It provides an overview of the history and current status of UAS airworthiness and operational regulation worldwide. Existing regulations have been developed considering the need for a complete regulatory framework for UAS. It focuses on UAS safety assessment and functional requirements, achieved in terms of defining an "Equivalent Level of Safety", or ELOS, with that of manned aviation, specifying what the ELOS requirement entails for UAS regulations. To accomplish this, the safety performance of manned aviation is first evaluated, followed by a novel model to derive reliability requirements for achieving target levels of safety (TLS) for ground impact and mid-air collision accidents. It discusses elements of a viable roadmap leading to UAS integration into the NAS. For this second edition of the book almost all chapters include major updates and corrections. There is also a new appendix chapter.

Air Force Handbook 1 U. S. Air Force, 2018-07-17 This handbook implements AFD 36-22, Air Force Military Training. Information in this handbook is primarily from Air Force publications and contains a compilation of policies, procedures, and standards that guide Airmen's actions within the Profession of Arms. This handbook applies to the Regular Air Force, Air Force Reserve and Air National Guard. This handbook contains the basic information Airmen need to understand the professionalism required within the Profession of Arms. Attachment 1 contains references and supporting information used in this publication. This handbook is the sole source reference for the development of study guides to support the enlisted promotion system. Enlisted Airmen will use these study guide to prepare for their Promotion Fitness Examination (PFE) or United States Air Force Supervisory Examination (USAFSE).

Autonomous Flying Robots Kenzo Nonami, Farid Kendoul, Satoshi Suzuki, Wei Wang, Daisuke Nakazawa, 2010-09-15 The advance in robotics has boosted the application of autonomous vehicles to perform tedious and risky tasks or to be cost-effective substitutes for their - man counterparts. Based on their working environment, a rough classification of the autonomous vehicles would include unmanned aerial vehicles (UAVs), - manned ground vehicles (UGVs), autonomous underwater vehicles (AUVs), and autonomous surface vehicles (ASVs). UAVs, UGVs, AUVs, and ASVs are called UVs (unmanned vehicles) nowadays. In recent decades, the development of - manned autonomous vehicles have been of great interest, and different kinds of autonomous vehicles have been studied and developed all over the world. In particular, UAVs

have many applications in emergency situations; humans often cannot come close to a dangerous natural disaster such as an earthquake, a flood, an active volcano, or a nuclear disaster. Since the development of the first UAVs, research efforts have been focused on military applications. Recently, however, demand has arisen for UAVs such as aero-robots and flying robots that can be used in emergency situations and in industrial applications. Among the wide variety of UAVs that have been developed, small-scale HUAVs (helicopter-based UAVs) have the ability to take off and land vertically as well as the ability to cruise in flight, but their most important capability is hovering. Hovering at a point enables us to make more effective observations of a target. Furthermore, small-scale HUAVs offer the advantages of low cost and easy operation.

Assessing Unit Readiness Case Study of an Air Force Fighter Wing, 2000 In the context of developing a high-level, overarching system for managing the military readiness of the United States Air Force (USAF), Project AIR FORCE's Resource Management Program has undertaken an in-depth review of readiness problems in an active component operational fighter wing. The broad context stems from ongoing allegations of problems with readiness in the current environment of constrained resources and demanding contingency requirements. Our aim is to characterize the effects of this environment on a representative operational unit and to capture the generalizable features in a readiness management system designed for senior decisionmakers. At the time of writing, we were in the process of developing an architecture for an encompassing USAF readiness management system. At the generous invitation of its commanding officer, Col Mike Hostage, we focused on the 388th Fighter Wing (FW) at Hill Air Force Base, Utah. When we collected our data, the 388th was operating a primary mission authorized inventory (PMAI) of 54 F-16 Block 40 jets in three squadrons: the 4th, the 34th, and the 421st. These aircraft are equipped with Low-Altitude Navigation and Targeting Infrared-Night (LANTIRN) systems that render them among the most lethal ground attack systems in the world; the aircraft also have powerful air-to-air capability. As such, they are in high demand for contingency operations. The 388th Maintenance Squadron (MXS) provides intermediate-level maintenance support. Behind the flying and maintenance squadrons are a range of supporting squadrons and groups, as well as the wing command.

Future Spacecraft Propulsion Systems Paul A. Czysz, Claudio Bruno, 2006-09-19 An understandable perspective on the types of space propulsion systems necessary to enable low-cost space flights to Earth orbit and to the Moon and the future developments necessary for exploration of the solar system and beyond to the stars.
